Introduction to Statistical Mechanics If  $(H=0)$ , both the magnetized solutions have equal energy and are equally stable. (The solution near  $(M=0)$  is still unstable, being a state of high energy.) If  $(H)$  is sufficiently large there is only one solution (Figure 6-4(d)). The only possibility is that the system is magnetized by the applied

Classical mechanics is a physical theory describing the motion of macroscopic objects, from projectiles to parts of machinery, and astronomical objects, such as spacecraft, planets, stars, and galaxies. For objects governed by classical mechanics, if the present state is known, it is possible to predict how it will move in the future (determinism), and how it has moved in the past (reversibility).
