## **Database Management System Tutorial - Tutorialspoint**

Management Level: This is the front end for operator and engineer used to visualise the graphics for controlling and monitoring the systems which have computer workstation, server, web browser, printers. Automation Level: BMS Router and other main controllers connected in building network integrate the third-party system and connect BMS devices.

## **What is a CMDB (Configuration Management Database)?**

Relational Database Management Systems (RDBMS) A Relational database management system is developed specifically for relational databases that store data in the form of rows and columns of a table. The data within a relational database are related, and this makes accessing data very efficient.

## **Is there a Google database application? - Quora**

A configuration management database (CMDB) is a file -- usually, in the form of a standardized database-- that contains all relevant information about the hardware and software components used in an organization's IT (information technology) services and the relationships between those components. A CMDB provides an organized view of configuration data and a means of examining that data from

## **BMS Interview questions and answers | BMS System**

As MSDN states: the database will automatically become online if the recovery succeeds. If the recovery fails, the database will become suspect. The database is unavailable. So eventually it will be online or in SUSPECT. If it takes too long to recover you could start SQL Server without going through recovery, I believe there's a Trace Flag for that.
