Here we report an all-dry method for making SC cathode materials, with LiNi_{0.6}Mn_{0.2}Co_{0.2}O₂ (SC-NMC) used as a specific example. It was found that a SC-NMC precursor in the form of a previously unobserved rock-salt (Ni, Mn, Co)O solid solution phase can be made phase pure by ball milling.

This method may be viewed as a generalized coordinate descent method whereby the descent directions are chosen from a finite set. The generation of the descent directions are based on results from monotropic programming theory. The method may be alternatively viewed as an extension of the relaxation method for network flow problems [1], [2].
