March 2007 Back to the Constructing our lives package Architecture has in the past done great things for geometry. Together with the need to measure the land they lived on, it was people's need to build their buildings that caused them to first investigate the theory of form and shape. But today, 4500 years after the great pyramids were built in Egypt, what can mathematics do

Many physics textbook note - in interference and diffraction, waves, if shifted by 180 degrees, damp each other and energy disappears. I have mentioned this in an article [1]. As an additional example, fig.1 depicts wave interference pattern generated by the source when reflected. According to a common physics approach,

Speed is the magnitude of velocity. Velocity is the speed of an object plus its direction. Speed is called a scalar quantity and velocity is a vector quantity. Speed of Light The fastest possible speed in the universe is the speed of light. The speed of light is 299,792,458 meters per second. In physics this number is represented by the letter "c."
